CONSERVATION AND SURVEY DIVISION

Mark S. Kuzila - Director

The Conservation and Survey Division of the University of Nebraska is the agency designated by statute to investigate and interpret the geologically related natural resources of the state, to make available to the public the results of these investigations, and to assist in the development and conservation of these resources.

The division is authorized to enter into agreements with federal agencies to engage in cooperative surveys and investigations in the state. Publications of the division and the cooperating agencies are available from the Conservation and Survey Division, University of Nebraska, Lincoln, Nebraska 68588-0517.

The Conservation and Survey Division provides information and educational programs to all people without regard to race, color, national origin, sex or handicap.

Publication and price lists are furnished upon request.

Revised October 1998

ACKNOWLEDGMENTS

The authors gratefully acknowledge the contributions of the following Conservation and Survey Division personnel for production of this test-hole log book: Duane Mohlman for computer assistance, Melba Stemm for typing the logs, and Dee Ebbeka for drafting the illustrations.

INTRODUCTION

In 1930, the Conservation and Survey Division of the University of Nebraska and the U.S. Geological Survey began a program of cooperative groundwater studies in Nebraska. Since then test drilling by use of rotary drilling equipment has been an integral part of that program. This report contains logs of all the test holes drilled in the county under the program as well as those drilled by the Conservation and Survey Division with financial assistance from other government agencies.

The map in this report shows the location of all test holes drilled in the county since 1930.

Present techniques of test-hole logging and sampling include use of drilling mud suitable to drilling conditions, timing by stopwatch of the drilling of each 5-foot increment of depth, and removal of all cuttings from the test hole at intervals of 5 feet or less. During the drilling of the hole, cuttings from each interval are examined immediately; samples representing each 5-foot interval and each recognizable change in material are retained. After samples are washed, they are described lithologically and the color is evaluated by comparison with standard color charts. The samples then are dried, stored, and cataloged. Beginning in September 1951, the test holes have been logged electrically. All samples are processed and kept on open file in the offices of Conservation and Survey Division, 113 Nebraska Hall, University of Nebraska-Lincoln, 68588.

This publication is one of a series being issued to make more readily available the record of test holes drilled since 1930. The series of publications is made on a county basis and includes, with some exceptions, logs of all test holes drilled in each of the counties. The logs have not been reviewed for conformance with editorial standards and nomenclature.

The method whereby the altitude of the land surface at test-hole sites was determined is indicated in the heading of each log, as follows: a = altimeter, h = hand leveling, i = spirit leveling, t = estimated from topographic map.

The test-hole records accurately reflect subsurface conditions only at the locations where the test holes were drilled. Interpretive data reflecting probable subsurface conditions between test-holes are being compiled for publication in county reports and are available for inspection in the office of the Conservation and Survey Division.

Each test hole is identified by a number assigned in the field (for example #3-B-67, #41-79), and most are also identified by a number indicating its location within the land divisions of the U.S. Bureau of Land Management's survey of Nebraska. Location numbers of test holes east of the 6th principal meridian, which passes through Columbus in a north-south direction, are preceded by the capital letter A; those west of the principal meridian have no preceding letter. The first numeral indicates the township, the second the range, and the third the section. As shown in figure 1, the letters that follow the section number indicate the location of the test hole within the section, the first letter indicating the quarter section and the second letter indicating the quarter-quarter section. The letters A, B, C, and D are applied in counterclockwise direction beginning with A in the northeast quadrant. The last numeral is the serial number of the test hole within the quarter-quarter section. No number is shown unless more than one test hole is within the given quarter-quarter section.

Fig. 1. System for identifying test-holes according to their location.

Sand, cemented, fine texture.....	45.0	50.0
Gravel, fine texture.....	50.0	54.0
Clay, silty, buff, contains gravel.....	54.0	60.0
Clay, silty to sandy, buff.....	60.0	72.0
Sand and gravel, red, texture grades from sand to medium gravel.....	72.0	79.0
Sand and gravel, red, texture grades from sand to fine gravel.....	79.0	88.0
Gravel, red, texture grades from fine to coarse.....	88.0	100.0
Sand and gravel, red, texture grades from sand to fine gravel.....	100.0	104.0
Gravel, red, texture grades from fine to coarse.....	104.0	120.0
Clay, tan.....	120.0	123.0
Gravel, red, texture grades from fine to coarse.....	123.0	134.0

Cretaceous System - Upper Cretaceous Series - Colorado Group:

Carlile Formation:

Shale, tan to light gray.....	134.0	141.0
Shale, tan.....	141.0	149.0
Shale, calcareous, light gray.....	149.0	153.0
Shale, tan.....	153.0	154.5
Shale, dark gray to black.....	154.5	158.5
Limestone.....	158.5	159.0
Shale, calcareous, dark gray.....	159.0	160.0

Test Hole #61-A-50
(A19-3-5ddda)
Colfax County

Location: NE SE SE SE sec. 5, T. 19 N., R. 3 E., approximately

542 feet north and 22 feet west of southeast corner.

Ground elevation: 1,515.0 ft. (t) (Clarkson 7.5 min. quadrangle)

Depth to water: 29.4 ft. (11-17-50).

	<u>Depth, in feet</u>	
	From	To
Quaternary System, undifferentiated:		
Soil: silt, dark brown.....	0.0	0.5
Silt, moderately calcareous, medium yellowish gray, slightly calcareous and light in color below 1.5 ft., contains limonitic fragments below 10.0 ft...	0.5	18.0
Clay, silty, medium brown, lighter below 20.0 ft....	18.0	22.5
Till: clay, silty, sandy to gravelly, very calcareous, light gray.....	22.5	30.0
Sand and gravel, moderately calcareous, texture grades from fine sand to medium gravel, contains some till from 30.0 to 33.0 ft.....	30.0	38.0
Till: clay, silty to slightly sandy, moderately calcareous, light brown, texture of sand grades from very fine to fine, light gray below 43.5 ft., slightly calcareous from 50.0 to 55.0 ft.....	38.0	56.5
Till: silt, slightly clayey to sandy and gravelly, moderately calcareous, medium gray.....	56.5	60.0
Till: clay, silty to sandy and gravelly, moderately to very calcareous, medium gray.....	60.0	171.5
Sand, texture grades from very fine to fine with some medium.....	171.5	174.5
Silt, sandy, to sand, silty, slightly calcareous, light gray, texture grades from very fine to fine	174.5	180.0
Sand and gravel, principally quartz with some red and yellow silicates, texture grades from fine sand to medium gravel, contains silt from 190.0 to 190.3 ft.....	180.0	192.5
Silt, moderately clayey, light gray.....	192.5	195.0
Silt, slightly clayey to moderately sandy, light greenish gray, contains very fine sand.....	195.0	198.5
Sand and gravel, principally quartz with some green silicates, texture grades from fine sand to fine gravel, contains some silt from 198.5 to 200.0 ft., contains some medium gravel below 205.0 ft...	198.5	207.5
Silt, in part slightly sandy, medium greenish gray..	207.5	210.0
Sand and gravel, principally quartz and green silicates, texture grades from fine sand to fine gravel, slightly coarser below 215.0 ft.....	210.0	223.2

Cretaceous System - Upper Cretaceous Series - Colorado Group:

Carlile Formation:

Shale, clayey, yellowish green, medium greenish gray below 224.0 ft.....	223.2	224.5
Shale, clayey, moderately to very calcareous, dark gray.....	224.5	240.0

Test Hole #62-A-50
(A19-3-28bbbb)
Colfax County

Location: NW corner sec. 28, T. 19 N., R. 3 E., approximately

93 feet south and 27 feet east of northwest corner.

Ground elevation: 1,542.0 ft. (t) (Clarkson SE 7.5 min. quadrangle)

Depth to water: 34.8 ft. (11-22-50).

	<u>Depth, in feet</u>	
	From	To
Quaternary System, undifferentiated:		
Soil: silt, dark brown.....	0.0	0.5
Silt, medium grayish brown.....	0.5	1.0
Silt, slightly clayey, light gray with some limon- itic stain.....	1.0	2.0
Silt, light yellowish brown, slightly to moderately calcareous below 8.0 ft.....	2.0	33.0
Silt, soil-like, yellowish to dark brown.....	33.0	34.0
Clay, silty, medium brown with slight red tint.....	34.0	40.0
Till: clay, silty to sandy and gravelly, moderately calcareous, light gray, iron-stained below 45.0 ft.....	40.0	70.0
Till: clay, silty to sandy and gravelly, moderately calcareous, medium yellowish brown, medium gray from 105.0 to 130.0 ft.....	70.0	131.5
Till: clay, sand, and gravel, moderately calcar- eous, yellowish brown with much iron-stain.....	131.5	135.0
Till: clay, silty to sandy and gravelly, moderately calcareous, yellowish brown, in part gray below 136.5 ft., medium gray below 138.5 ft., very cal- careous from 140.0 to 200.0 ft.....	135.0	222.5
Sand and gravel, principally quartz with some light colored silicates, texture grades from fine sand to fine gravel, coarser below 230.0 ft.....	222.5	250.0
Cretaceous System - Upper Cretaceous Series - Colorado Group:		
Carlile Formation:		
Shale, clayey, moderately calcareous, dark gray, contains a few shell fragments.....	250.0	268.5
Limestone and shale, very calcareous, medium gray...	268.5	270.0

Test Hole #59-A-50
(A20-3-17aaaa)
Colfax County

Location: NE NE NE NE sec. 17, T. 20 N., R. 3 E., approximately
 12 feet south and 136 feet west of northeast corner.

Ground elevation: 1,480.0 ft. (t) (Clarkson 7.5 min. quadrangle)

Depth to water: 7.7 ft. (11-8-50).

	<u>Depth, in feet</u>	
	From	To
Quaternary System, undifferentiated:		
Soil: silt, dark brown, black below 2.5 ft.....	0.0	3.5
Silt, dark brown.....	3.5	5.5
Silt, moderately clayey, dark brown.....	5.5	6.0
Clay, silty, to silt, clayey, medium grayish brown..	6.0	7.0
Clay, silty, light grayish brown.....	7.0	8.5
Silt, light grayish brown, light yellowish gray below 10.0 ft.....	8.5	17.0
Silt, medium yellowish brown, slightly clayey from 17.0 to 20.0 ft.....	17.0	29.5
Silt, moderately calcareous, medium yellowish gray, contains a few shell fragments and many limonitic fragments.....	29.5	36.0
Silt, slightly sandy, moderately calcareous, medium gray, contains fine to medium sand, contains a few gastropod shells, very calcareous, contains wood fragments and many shells.....	36.0	45.0
Silt, sandy, to sand, silty, very calcareous, dark gray, contains some fine to medium gravel, con- tains many gastropod shells and wood fragments....	45.0	50.0
Sand and gravel, principally black silicates, tex- ture grades from medium sand to medium gravel, contains wood fragments and clay pebbles, contains some coarse gravel below 55.0 ft.....	50.0	57.5
Till: clay, silty, slightly to moderately calcar- eous, medium gray, light gray below 61.0 ft.....	57.5	69.0
Sand, principally quartz with some dark colored and green silicates, texture grades from very fine to fine, contains some medium sand and a few shell fragments below 80.0 ft., contains some coarse sand below 101.0 ft., contains some fine gravel below 140.0 ft., contains a few chalk fragments below 145.0 ft.....	69.0	149.5
Silt, sandy, moderately calcareous, light bluish gray, contains very fine sand.....	149.5	155.0
Silt, moderately calcareous, light bluish gray, slightly to moderately clayey below 158.0 ft., contains a few wood fragments below 160.0 ft.....	155.0	162.0
Silt, sandy, medium brown, contains very fine to fine with a trace of medium sand.....	162.0	165.0

Sand, silty, to silt, sandy, texture of sand grades from very fine to fine, slightly calcareous, contains some medium to coarse sand below 170.0 ft...	165.0	171.0
Silt, slightly clayey, moderately calcareous, light bluish gray.....	171.0	175.5
Silt, slightly clayey, light gray with brown tint...	175.5	176.5
Silt, moderately clayey, slightly calcareous, light gray with brown tint.....	176.5	180.0
Silt, moderately clayey to sandy, light gray, contains very fine to fine sand.....	180.0	181.5
Silt, sandy, medium grayish brown, interbedded with sand and gravel.....	181.5	185.0
Sand and gravel, principally quartz with some green and pink silicates, slightly calcareous and slightly silty below 190.0 ft.....	185.0	193.5
Cretaceous System - Upper Cretaceous Series - Colorado Group:		
Carlile Formation:		
Shale, clayey to silty, moderately calcareous, medium gray, contains some aragonite.....	193.5	210.0

Test Hole #60-A-50
(A20-3-29aaab)
Colfax County

Location: NW NE NE NE sec. 29, T. 20 N., R. 3 E., approximately
 18 feet south and 366 feet west of northeast corner.
 Ground elevation: 1,625.0 ft. (t) (Clarkson 7.5 min. quadrangle)
 Depth to water: 39.8 ft. (11-17-50).

	<u>Depth, in feet</u>	
	From	To
Quaternary System, undifferentiated:		
Soil: silt, dark grayish brown.....	0.0	0.5
Silt, moderately clayey, medium brown.....	0.5	2.0
Silt, yellowish brown with limonitic stain.....	2.0	5.0
Silt, slightly calcareous, light yellowish gray, moderately calcareous from 10.0 to 20.0 ft.....	5.0	25.0
Silt, light yellowish gray.....	25.0	36.5
Silt, soil-like, medium brown to dark grayish brown.	36.5	38.0
Clay, moderately silty, medium brown.....	38.0	42.0
Till: clay, silty to sandy and gravelly, very cal- careous, light gray, contains limy fragments and limonitic fragments.....	42.0	45.0
Till: clay, silty to sandy and gravelly, moderately calcareous, light yellowish gray, yellowish brown from 70.0 to 85.0 ft., in part medium gray below 100.0 ft.....	45.0	132.5
Till: clay, silty to slightly sandy and gravelly, moderately calcareous, medium gray.....	132.5	189.0
Sand, principally quartz with some black silicates, texture grades from fine to medium with some coarse.....	189.0	216.0
Silt, slightly clayey, light bluish gray.....	216.0	218.5
Sand, principally quartz with some black silicates, texture grades from very fine to fine with some medium, coarser below 225.0 ft., contains some coarse sand below 265.0 ft.....	218.5	270.0
Sand and gravel, quartz with green and pink sili- cates.....	270.0	285.0
Cretaceous System - Upper Cretaceous Series - Colorado Group:		
Carlile Formation:		
Shale, clayey, yellow, moderately calcareous and in part light gray below 290.0 ft.....	285.0	295.0
Shale, clayey, very calcareous, yellowish gray, medium gray below 300.0 ft.....	295.0	310.0
